SUMMARY

I am a 19 year old full stack web developer and I can create and maintain websites both on the front end and back end. In all my previous work experiences, I have been known in my past work experiences to have a bright personality that can help lift the spirits of coworkers who are struggling. I have graduated from high school with honors at a 3.5 gpa.

- GraphQL api
- RESTful api

PROJECTS

BlitzandChaos — *Interactive Story*

An interactive story where the main character – YOU, the user – will embark on a mission to save the world from a DRAGON! The user will read a story and make decisions, which will determine the final outcome. In the end, you will either find a way to save everyone (including yourself) or be forced to watch everything burn in an unstoppable, fiery apocalypse. The choice is yours. Choose wisely.

Password Generator — *Password Generator App*

A password generator that generates a random password when given specific criteria for the password such as length, and what characters to use.

Repository: https://github.com/Justinean/password-generator

Weather Dashboard — *Weather App*

A weather dashboard that you can search for the weather using the postal code and the country of the location you want the weather of. It stores previously searched locations so you can just click on a button to display the weather of that location again. You can also clear the previously searched locations. The app displays the current weather, and a five day forecast, which tell you the temperature, weather conditions, wind, humidity, and the UV index.

Repository: https://justinean.github.io/weather-dashboard/

Manage Me Now — *Project Management App*

A project and employee handle. Managers can create projects and tasks and assign those to employees. Employees can't change anything but they can change their profile pictures and view company projects and their own projects.
